This turnaround strategy has been designed to reverse a negative financial and operational trend and get the organization (AHS) back on track to profitability. According to Jonson Scholes and Whittington (1995) turnaround strategy refers to a mechanisms that enhance speed of change, rapid cost reduction and revenue generations. It is important to note that this turnaround strategy will bring AHS to its original position and stabilize its performance.

The current financial position of the organization has positioned management to embark in a “turnaround management strategy” as top on the list of important things to do.

The importance of turnaround strategy is that it converts a loss making organization into a profitable one.

**Turnaround Strategy Flow Map**

- Restructuring debts & Working capital to improve liquidity
- Intensify core staff skills training, customer care
- Restructuring AHS cost base
- Intensify use of clinical laboratory testing, scanning and portable X-ray
- Embark on clinical specialist consultations in urban clinics

**Financial Picture 2015 to 2019**

- Working Capital
- Liquidity
- Profit
- Expenses
- Revenue

**Strategic Implementation**

- Working Capital – AHS is focusing on ways to increase sales revenues, proper management of inventory and reduce accounts receivable as well as payables.
- Liquidity – AHS is focusing on five strategic areas to improve its liquidity
  - Early invoice submission – from all clinics on Service Level Agreement with Government, and to all medical schemes.
  - Switching from short-term debts to long term debts.
  - Get rid of useless Assets
  - Control overhead expenses
  - Negotiate for longer payment terms
- Accounts Receivables – AHS is focusing on monitoring accounts receivables effectively to ensure that clients are properly billed and the prompt payments are received.
- Accounts Payables – AHS is negotiating for longer payments terms with local suppliers especially those supplying drugs and medical supplies.
- Profitability - AHS is reviewing the profitability of the service i.e. drug sales and on going process assessing where prices can be adjusted on regular basis to maintain or increase profitability.
- Income and Expenses – AHS is reviewing it income and expenses. To increase income and decrease expenses, the following turnaround strategies shall be put in place;
  - Cutting expenses on expense items that may not cause net loss
  - Getting rid of extra inventory
  - Evaluating labor needs, i.e. skills training
  - Having suppliers who sale quality standard supplies for a lower price
  - Urban clinic to have specialized doctors to consult.

**Summary**

1. The graphs in this presentation indicate a decline in institutional operations and therefore requires a quickly implementation of turnaround strategies.
2. Improvement in Liquidity and working capital vital.
3. Right sizing the cost
4. Ensuring that the institution has the right team in place
5. Ensuring full control for institution cash flow
