

Quality Improvement Project Area COVID

THE PROBLEM

What problem is your institution trying to improve?

Due to high patient demand: we have a limited number of beds. Get qualified staff in time to meet the demand.

OBJECTIVES

- To have trained and qualified personnel back up
- Providing specialized care and treatment options
- Improve processes, achieving a positive impact on the quality of care
- To effectively and efficiently manage the resources allocated to the purchase of medicines and PPE

PLAN CYCLE

- Assign permanent staff for the management of critically ill patients
- Maintain constant supervision
- Hire qualified personnel for its function

ACTION

- Timely patient management
- contracting suppliers so as not to have setbacks when it comes to needing medicines and consumables, since demand can make them scarce, and costs can rise.

STUDY

Consult COVID patients with Psychology and Chaplaincy to provide emotional and spiritual support. Also offer to the family members and our health personnel, who are constantly affected emotionally when facing difficult cases.

FUTURE STEPS

- Enable a permanent Respiratory Unit
- To be able to perform PCR tests in our Center, so that they are available to patients.
