

Contact Tracing- Highlight of Kanye Adventist Hospital Activity for GHC 2021

As a mission hospital operating as part of the public health network in Botswana, Kanye Adventist Hospital participates in the district response to COVID 19. The hospital was allocated a “catchment area” around our location in which our team undertakes community contact tracing and testing, risk assessment for home management as well as monitoring and management of persons on home isolation. The area includes homes and several schools and preschools.
